

INTERNATIONAL PETROLEUM STATISTICS REPORT

November 1997

**Energy Information Administration
Energy Markets and Contingency Information Division**

Preface

The International Petroleum Statistics Report is a monthly publication that provides current international oil data. This report is published for the use of Members of Congress, Federal agencies, State agencies, industry, and the general public. Publication of this report is in keeping with responsibilities given the Energy Information Administration in Public Law 95-91 (Section 205(a)(2)) that states:

"The Administrator shall be responsible for carrying out a central, comprehensive, and unified energy data and information program which will collect, evaluate, assemble, analyze and disseminate data and information ..."

The International Petroleum Statistics Report presents data on international oil production, demand, imports, and stocks. The report has four sections. Section 1 contains time series data on world oil production, and on oil demand and stocks in the Organization for Economic Cooperation and Development (OECD). This section contains annual data beginning in 1985, and monthly data for the most recent two years. Section 2 presents an oil supply/demand balance for the world. This balance is presented in quarterly intervals for the most recent two years. Section 3 presents data on oil imports by OECD countries. This section contains annual data for the most recent year, quarterly data for the most recent two quarters, and monthly data for the most recent twelve months. Section 4 presents annual time series data on world oil production and oil stocks, demand, and trade in OECD countries. World oil production and OECD demand data are for the years 1970 through 1996; OECD stocks from 1973 through 1996; and OECD trade from 1986 through 1996.

Data for the United States are developed by the Energy Information Administration's (EIA) Office of Oil and Gas. Data for other countries are derived largely from published sources, including International Energy Agency publications, the EIA International Energy Annual, and the trade press. (See sources after each section.) All data are reviewed by the International Statistics Branch of EIA. All data have been converted to units of measurement familiar to the American public. Definitions of oil production and consumption are consistent with other EIA publications.

General information about this publication may be obtained from W. Calvin Kilgore, Director, Office of Energy Markets and End Use, (202) 586-1617, and from Louis D. DeMouy, Director, Integrated Energy Statistics Division, (202) 586-6557. Detailed questions and comments concerning the contents of the International Petroleum Statistics Report may be directed to Michael J. Grillot, Team Leader, International Statistics Team, (202) 586-6577; Patricia A. Smith (202) 586-6925, or to H. Vicky McLaine (202) 586-9412; Oil Market Chronology - Douglas MacIntyre (202) 586-1831.

Notes: As of December 31, 1994, Gabon withdrew its membership in the Organization of Petroleum Exporting Countries (OPEC). For consistency, Gabon is excluded in the historical series of OPEC totals.

Oil Market Chronology -- October 1997

The following chronology lists international events of potential significance for world petroleum markets. Sources include: Dow Jones (DJ), the New York Times (NYT), the Washington Post (WP), and the Wall Street Journal (WSJ).

October 1 Russian oil company AO Sidanko's petition to settle a lengthy legal battle with the Russian government and state-owned AO Rosneft for control of the Siberian oil production company AO Purneftegaz is accepted by the Supreme Arbitration Court. The end of the lawsuit clears the final hurdle for the privatization of AO Rosneft. (DJ)

South Korea's state-owned Korea Petroleum Development Corporation (Pedco) agrees to participate in a consortium to develop Venezuela's Onado oil field. Pedco will hold a 12 percent interest in the development project with the remaining 88 percent split among CGC of Argentina, Carmanah Resources Limited of Canada, and Distral of Venezuela. The Onado field contains 162 million barrels of oil and is expected to produce 52,000 barrels per day beginning in January 1998. (DJ)

October 2 In a joint statement, Norway's Saga Petroleum and state-owned Statoil announce a deal to jointly develop the Haltenbanken South oil and gas area in the Norwegian Sea. The deal combines Haltenbanken's four fields, Kristin, Lavrans, Tyrihans, and Trestakk, into one unit and should speed up the development of the area. Combined reserves are estimated at around 7 trillion cubic feet of natural gas and 630 million barrels of crude oil and condensate. Production is expected to start in 2001. (DJ)

The Venezuelan Congress approves a proposed \$2.5 billion joint venture between Lagoven, a unit of state-owned Petroleos de Venezuela, U.S.-based Mobil, and Germany-based Veba Oel AG to extract and upgrade extra heavy crude oil from the Cerro Negro zone of the Orinoco belt. The project is projected to last 35 years with peak production of 120,000 barrels per day reached by 2001. (DJ)

October 5 Japan Gasoline Corporation (JGC) announces that it has won a contract to design, build, and equip an oil refinery in Pakistan. JGC estimates the total cost of the project to be around \$600 million. The refinery will include a crude oil distillation unit and a hydrocracker and will have a processing capacity of 100,000 barrels of crude oil per day, making it Pakistan's largest refinery. It is designed to help meet Pakistan's domestic demand for oil products and is expected to be complete by the end of 2000. (DJ)

October 6 Japan's Itochu Corporation and Japan Gasoline Corporation secure an oil refinery construction contract from the Georgian government. The contract is estimated to be worth between \$200 and \$300 million, with construction beginning in 1998 and start-up scheduled for 2001. The refinery will be built in Supsa on the Black Sea and will process 60,000 barrels of crude oil per day. It will supply gasoline, gas oil, and heavy fuel oil for domestic consumption in Georgia and export to Ukraine, Turkey, and other neighboring countries. (DJ)

The Malaysian government confirms that it has approved a proposal submitted by Japan's Chiyoda Corporation to build a 118-mile crude oil pipeline across the Malay peninsula. The \$2 billion pipeline will have the capacity to carry 2 million barrels per day from the Malaysian town of Alor Setar to the Thai port of Sai Buri. Thailand still needs to approve the project before it can go forward, but, Chiyoda is expecting that to occur soon. (DJ)

The U.S. Department of Energy announces that it will sell its 78 percent share of the Elk Hills Naval Petroleum Reserve in California to Occidental Petroleum for \$3.6 billion. Currently, Elk Hills produces 60,000 barrels per day of oil, down from a high of 150,000 barrels per day in 1981. The U.S. Congress and the U.S. Department of Justice have 31 days and 60 days, respectively, to review the sale. (DJ)

- October 8** The United Nation's Iraq Sanctions Committee votes to provide funds to Turkey to purchase spare parts for the Kirkuk-to-Yumurtalik pipeline that carries Iraqi crude oil to the Turkish port of Ceyhan. The Committee said that the funds are for medium-term maintenance of the pipeline which is to carry at least half of Iraq's oil exports under the current six-month phase of the oil-for-food program. (DJ)
- October 9** Turkey's state-owned oil company, Turkiye Petrolleri AO (TPOA), signs a \$750 million deal with Kazakhstan to develop oil reserves in the northwestern Aktyubinsk region near the Caspian Sea. The contract is expected to last at least 29 years, and Kazakhstan could earn \$1.8 billion in revenues. TPOA and Amoco will set up a 50-50 joint venture to finance and implement the project. The first four years of the contract are set aside for exploration and the following 25 years for production. Turkish officials estimate that the region contains about 327 million barrels of oil. (WSJ)
- Norway's state-owned oil company, Statoil AS, reports that so far about 60 million barrels of recoverable oil have been found in eight exploration wells drilled this year. In the North Sea, new discoveries were made in the Beta West structure on the Yme field, in the Glitne oil field north of the Sleipner area, and in the Statfjord field. By the end of the year, Statoil will drill four more exploration wells. Its greatest expectations are for the first deep water well on the Vena Dome in the Voering plateau in the Norwegian Sea. (DJ)
- October 11** Pilipinas Shell Petroleum Corporation, a unit of Royal Dutch/Shell, and Occidental Philippines Incorporated, a unit of Occidental Petroleum Corporation of the U.S., announce a \$5 billion joint venture to distribute natural gas from the Malampaya/Camago natural gas field off the western Philippine island of Pauline. The Philippines has depended heavily on imported coal and oil for its energy needs and has begun to develop its domestic energy resources to reduce this dependence. The Filipino government will retain 60 percent of the revenues generated by the project which should translate into an estimated \$8 billion. The remaining 40 percent goes to the Shell/Occidental partnership. Shell and Occidental stand to earn \$500 million per year in revenues with investments fully recovered in seven to eight years. (DJ)
- Nine days after signing a \$2 billion contract with the National Iranian Oil Company, France's Total SA begins Phases Two and Three of the development plan for Iran's South Pars natural gas field. The field contains an estimated 280 trillion cubic feet of natural gas and 7.5 billion barrels of natural gas liquids. Phases Two and Three are designed to produce two billion cubic feet of natural gas per day over 30 years. The deal has the support of the European Union, but has drawn harsh criticism from the United States. (DJ)
- Egypt and Libya announce a \$1 billion project that includes the construction of a 386-mile oil pipeline between the two countries. The line will transport up to 150,000 barrels of oil per day, carrying Libyan crude oil from the border town of Tobruk to Egyptian refineries. (DJ)
- October 13** The Gulf Cooperation Council (GCC), whose membership includes Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates, opens a two-day conference with the European Union in Manama, Bahrain, focusing on advanced oil and gas technologies. Fayed al-Sadah, general manager of Bahrain National Oil Company, opened the conference by stating that world crude oil demand is expected to rise from today's level of 72 million barrels per day to 96 million barrels per day by 2010 and that the GCC states are ready to meet any increases in world oil demand. (DJ)
- October 14** Shell U.K. Exploration and Production reports that production has started on the Central North Sea Kingfisher condensate field, four weeks ahead of schedule and significantly under budget. The field's reserves are estimated at 56 million barrels of crude oil and condensate and 368 billion cubic feet of gas. Kingfisher is located about 155 miles northeast of Aberdeen. A second production well should be flowing by the end of 1997 and four more wells are expected on line by early 1999. (DJ)
- At a joint news conference, officials from Turkmenistan and Iran announce an agreement to set up a joint consortium to develop offshore oil and gas fields located on their joint border in the Caspian Sea. The two countries also agreed to further efforts toward determining the legal status of the Caspian region in order to provide more guarantees to international companies interested in long-term work in the Caspian. (DJ)

October 20 Two of Mexico's main Gulf Coast crude oil export ports reopen after being closed for five days due to poor weather conditions. The port of Pajaritos usually exports around 400,000 barrels of oil per day and the port of Dos Bocas exports around 300,000 barrels per day. These two ports, along with the port of Cayo Arcas, handle the vast majority of exports from state-owned Petroleos Mexicanos. (DJ)

The Maritime and Port Authority of Singapore confirms that a 166,500-barrel oil spill from a collision of two oil tankers has been contained in a region southwest of Singapore. On October 15, an empty, very large crude carrier and an oil tanker collided in the Singapore Strait. The oil tanker was carrying about 800,000 barrels of marine fuel oil before the collision. Neither ship was in danger of sinking and clean-up operations began immediately. However, clean-up efforts have been hampered by thick haze from forest fires in nearby Indonesia. The individuals in charge of the two vessels have been charged with reckless navigation. The spill has been described as Singapore's worst. (DJ)

October 21 The U.S. Department of Energy and Arthur D. Little, Inc. announce a new method of producing electricity from gasoline by extracting hydrogen from the gasoline. The technique delivers over 80 percent of the energy from gasoline to a fuel cell which converts the energy to electricity. Useful energy per gallon of gasoline doubles over conventional combustion engines. The costs per kilowatt of capacity will need to be lowered for commercialization. However, engineers expressed confidence that the costs of the fuel cells can be reduced through mass production. Energy Secretary Federico Peña said that such cars would be on the road by 2010. (NYT)

Thailand's Songkla Petroleum & Chemical Limited signs a \$2.2 billion contract with a German joint venture company, Kruppe Uhde GmbH & Thyssen Rheinstahl Technik GmbH, to design and build a crude oil refinery, a petrochemical complex, and a 150-megawatt power plant. The project is part of Thailand's Southern Seaboard Development program and will be constructed in Songkla province in southern Thailand. The oil refinery will have a capacity of at least 125,000 barrels per day. (DJ)

Qatar General Petroleum Corporation announces that it will move forward with its plans to build a gas pipeline from its North Dome natural gas field to Jebel Ali in the United Arab Emirates. The proposed pipeline will have a capacity of 800 million cubic feet per day and is scheduled to be completed in three years. The project is being developed by a five-member consortium led by Atlantic Richfield of the U.S. (DJ)

October 22 Kazakhstan's Ambassador to Rome, Olxas Suleimenov, announces that Italy's Ente Nazionale Idrocarburi (ENI), Texaco, BG PLC, and Kazak Gas will invest \$9 billion over 40 years to develop Kazakhstan's giant Karachaganak oil and gas field. ENI and BG will each hold a 32 percent stake in the field, Texaco 20 percent and Kazak Gas 16 percent. The Karachaganak field contains reserves of 17.66 trillion cubic feet of gas and 2.2 billion barrels of crude oil and condensates. (DJ)

October 23 Oilwatch Alaska, an oil industry watchdog group, is calling for an antitrust investigation of the companies that control the Trans-Alaska oil pipeline. The group charges that high shipping charges are strangling competition for development of the North Slope oil fields. Oilwatch also accuses the companies of overcharging for oil shipments through the pipeline, which allegedly cuts into profits and costs the state of Alaska billions of dollars in royalties and taxes. The 800-mile pipeline carries 20 percent of US domestic oil production. The companies that control the pipeline include: British Petroleum 50 percent, Arco 22 percent, Exxon 20 percent, and Mobil 3.2 percent. Amerada Hess, Philips Petroleum, and Unocal each own less than 2 percent. (DJ)

The Afghanistan Taliban Islamic movement and Turkmenistan have reached an agreement on setting up a tripartite commission to build a natural gas pipeline from Turkmenistan to Pakistan via Afghanistan. Officials from Turkmenistan and Pakistan signed an agreement in July 1997 to build the pipeline which will carry up to 706 billion cubic feet per year of Turkmen gas. (DJ)

In response to Iraq's recent refusal to comply with United Nations (U.N.) arms inspections, the U.N. Security Council approves a resolution condemning Iraq's actions. Although the measure does not add new sanctions on Iraq, it expresses the Council's intentions of adopting travel restrictions on Iraqi military and intelligence officials if Iraq continues to inhibit U.N. arms inspections. The resolution passed by a 10-0 vote with five abstentions. (DJ)

- October 25** The State Oil Company of Azerbaijan opens an oil pipeline stretching northwest from Baku on the Caspian Sea, through a 93-mile segment in Chechnya, and on to the Russian port of Novorossiysk on the Black Sea. The ceremony marks the first time Azerbaijan has exported its own oil to Western markets in 65 years. (WP)
- October 27** Unocal Corporation organizes a multinational consortium to build a natural gas pipeline from Turkmenistan to Pakistan, and possibly India, via Afghanistan. The CentGas pipeline will cost about \$2 billion and will transport two billion cubic feet of gas per day 790 miles from the Turkmen border to Multan, Pakistan. The pipeline is expected to take two years to complete. The consortium has also proposed a \$600 million, 400-mile extension to New Delhi. Unocal will act as project leader, retaining a 46.5 percent interest in the project. The rest of the consortium consists of Saudi Arabia's Delta Oil (15 percent), the Turkmen government (7 percent), Japan's Itochu Oil Exploration (6.5 percent), Indonesia Petroleum (6.5 percent), Korea's Hyundai Engineering & Construction (5 percent), and Pakistan's Crescent Group (3.5 percent). A 10 percent share has been reserved for Russia's Gazprom, which is expected to sign onto the project soon. (WSJ)
- The *Tehran Times* newspaper reports that Russia and Iran have signed a memorandum of understanding for Russia to build an oil refinery and a petrochemical complex in the Chahbahar free trade and industrial zone in southeast Iran. (DJ)
- Under pressure from the U.S. Congress, the U.S. Export-Import Bank is expected to suspend \$186 million in loan guarantees to 21 oil service companies, that were expecting to sell oil well drilling and measuring equipment to Russia's Gazprom over the next year. The U.S. Congress is calling for the suspension of the loans because of Gazprom's ties to Iran. Gazprom recently signed onto a \$2 billion contract to develop Iran's South Pars natural gas field, a deal that may violate the Iran and Libya Sanctions Act. The Export-Import Bank is due to vote on the loan guarantees by the end of 1997. (DJ)
- October 28** The U.S. Senate passes the \$13.8 billion Interior Appropriates bill that includes a provision directing the Department of Energy to sell \$207.5 million of oil from the Strategic Petroleum Reserve. Revenues from the sale will pay for the Reserve's operations over the next year. The bill also extends for another year the current moratorium on offshore oil and gas drilling in parts of the Gulf of Mexico and Alaska. The U.S. House of Representatives has already passed its version of the bill and President Clinton is expected to sign it. (DJ)
- October 29** A consortium of South Korean, British, and Italian firms has discovered an oil field in Libya with estimated recoverable reserves of one billion barrels. The field is located 466 miles south of Tripoli on the Murzuk NC-174 block. A contract to explore the field was signed in 1990 by the consortium and Libya's National Oil Company. Under the terms of the agreement, the Libyan company will retain 75 percent of the oil produced and the rest will be equally split among the consortium's members. (DJ)
- Iraq's Revolution Command Council, the country's main decision making body, announces that it will no longer allow U.S. citizens and U.S. aircraft to serve with the United Nations (U.N.) arms inspection teams. The council's statement gives U.S. citizens working with the inspection teams one week to leave Iraq. Iraq has also asked the U.N. to stop flights by American reconnaissance aircraft monitoring its compliance with U.N. resolutions requiring the elimination of weapons of mass destruction. In response to this statement, the U.N. Security Council unanimously approves a statement condemning Iraq's threats to expel the Americans. (DJ)
- October 31** Chevron Corporation announces that its Kuito Field (formally known as Block 14) off the coast of Angola, may contain at least one billion barrels of oil. This estimate makes the field one of Chevron's largest finds in several decades. Production is expected to begin by early 1999. Chevron holds a 31 percent interest in the field followed by France's Total, Italy's Agip, and the Angolan government each with 20 percent share, and by Portugal's Petrogal with about a 9 percent share. (WSJ)

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In September 1997, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 530 thousand barrels per day.

Notes: •OPEC=Organization of Petroleum Exporting Countries. •Monthly data are often preliminary and also may not average to the annual totals due to rounding.

^{1/} Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. R=Revised data. E=Estimated. PE=Preliminary estimate. RE=Revised estimate.

Notes: *Monthly data are often preliminary and also may not average to the annual totals due to rounding. See Section 4 for historical series.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In September 1997, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 530 thousand barrels per day.

Notes: •OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in this group.
 •Monthly data are often preliminary and also may not average to the annual totals due to rounding.

Sources: See end of Section 1.

1/ Through December 1990, the data for Germany are for the former West Germany only. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

2/ "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

3/ U.S. geographic coverage is the 50 States and the District of Columbia.

4/ "Other" consists of Australia, New Zealand, and the U.S. Territories.

R=Revised data.

Notes: •The term Demand is used interchangeably with Consumption and Petroleum Products Supplied. See Appendix C for definition. •See Section 4 for historical series.

Sources: See end of Section 1.

Sources for Section 1 (Annual and Monthly Oil Data)

Crude Oil Production, Natural Gas Liquids Production, Other Liquids, and Refinery Gain

United States: Energy Information Administration (EIA), Petroleum Supply Annual 1996 and Petroleum Supply Monthly, October 1997.

Other Countries: Annual data -- EIA, International Energy Annual, various issues. Monthly data -- Canada -- Maclean Hunter Publishing Company, Oilweek, various issues. Denmark, Mexico, Netherlands, Norway, Germany, and all OPEC countries -- Petroleum and Energy Intelligence Weekly, Inc., Petroleum Intelligence Weekly, various issues. All Other Countries -- PennWell Publishing Company, Oil and Gas Journal, various issues. Refinery Gains: National Petroleum Council, U.S. Petroleum Refinery Study, October 1986.

Oil Stocks

United States: EIA, Petroleum Supply Annual 1996 and Petroleum Supply Monthly, October 1997.

Other OECD Countries: • Organization for Economic Cooperation and Development (OECD), Quarterly Oil Statistics and Energy Balances, various issues. • OECD, Monthly Oil Statistics data base, 1985-1997.

Oil Demand

United States: EIA, Petroleum Supply Annual 1996 and Petroleum Supply Monthly, October 1997.

Other OECD Countries: • OECD, Quarterly Oil Statistics and Energy Balances, various issues. • OECD, Monthly Oil Statistics data base, 1985-1997.

^{1/} Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from coal and other sources.

^{2/} U.S. geographical coverage is the 50 States and the District of Columbia. See Explanatory Note 1 in Appendix B.

^{3/} The term Demand is used interchangeably with the terms Consumption and Petroleum Products Supplied. See Appendix C for definition.

^{4/} Stock draws are positive numbers, stock additions are negative numbers.

^{5/} This is computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw.

NA = Not Available.

Note: Sum of components may not equal total due to rounding.

1/ U.S. geographic coverage is the 50 States and District of Columbia.

2/ "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

3/ The data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •OECD=Organization for Economic Cooperation and Development; OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in these groups. •Negative numbers represent net exports. •A dash (-) indicates no trade.

•Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day. •See Section 4 for annual data.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1970 through 1989 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

P=Preliminary.

¹/ Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. P=Preliminary. R=Revised data.

1/ Data through December 1990 are for the former West Germany. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

2/ "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

3/ U.S. geographic coverage is the 50 States and the District of Columbia. In the United States in January 1975, 1981, and 1983, numerous respondents were added to bulk terminal and pipeline surveys affecting subsequent stocks reported. Using the new basis, the end-of-year U.S. stocks, in million barrels, would have been 1,121 in 1974, 1,425 in 1980, and 1,461 in 1982.

4/ "Other" consists of Australia, New Zealand, and the U.S. Territories.

P=Preliminary. R=Revised data.

Note: Oil Stocks - See Explanatory Note 2 in Appendix B.

Sources: See end of Section 4.

Appendix A

Organizational and Geographical Definitions

Appendix A. Organizational and Geographical Definitions

International Energy Agency (IEA) countries are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

Organization for Economic Cooperation and Development (OECD) countries are: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, Mexico, Poland, and South Korea which are not yet available.

OECD Europe countries are: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

Organization of Petroleum Exporting Countries (OPEC) members are: Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. As of December 31, 1992, Ecuador withdrew its membership in OPEC, and as of December 31, 1994, Gabon withdrew its membership. For consistency, Ecuador and Gabon are excluded in the historical series of OPEC totals.

Arab members of OPEC are: Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Organization of Arab Petroleum Exporting Countries (OAPEC) are: Algeria, Bahrain, Egypt, Iraq, Kuwait, Libya, Neutral Zone, Qatar, Saudi Arabia, Syria, Tunisia, and the United Arab Emirates. In April 1979 Egypt was suspended from OAPEC membership. In May 1989 Egypt rejoined OAPEC. For consistency, Egypt is included in the historical series of the OAPEC totals.

Persian (Arabian) Gulf countries are: Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates.

The term "Former USSR" is being used in the International Petroleum Statistics Report as a purely geographical expression, referring to the Commonwealth of Independent States (CIS), Georgia, and the three Baltic States (Estonia, Latvia, and Lithuania).

Appendix B

Explanatory Notes

Appendix B. Explanatory Notes

Note 1: World Oil Supply

Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gain, alcohol, and liquids produced from coal and other sources. Beginning in 1993, U.S. data includes fuel ethanol blended into finished motor gasoline and oxygenate production from merchant MTBE plants.

Note 2: Oil Stocks

The International Energy Agency (IEA) assembles and reports total oil stock data for the member countries of the Organization for Economic Cooperation and Development (OECD). Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. In its report titled Quarterly Oil Statistics and Energy Balances of OECD Countries, the IEA defines oil stocks as follows: "All non-military stocks held by importers (including all final consumers directly), refiners, Governments, major non-importing final consumers eligible under IEA/OECD commitments and by foreign entities in the following facilities: bulk terminals, refinery tanks, pipeline tankage, barges, intercoastal tankers (when port of departure and destination are in the reporting country), tankers in port (to the extent that their cargo is to be unloaded in the reporting country), and inland ship bunkers. Oil is reported regardless of the ownership of such storage facilities." IEA data exclude "oil held in pipelines, rail and truck tank cars, sea-going ships' bunkers, service stations, retail stores and tankers at sea." Also the IEA defines the United States to be the 50 States and the District of Columbia, and the U.S. Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). The Energy Information Administration (EIA) does not include the United States Territories in its statistical definition of the United States. Further, the EIA includes oil in oil pipelines as part of its stock data. Tables 1.5, 1.6, 2.3, and 4.4 include oil stocks for the United States according to EIA definitions. Using IEA definitions, at the end of June 1997 United States (including territories) oil stocks totaled 1,430 million barrels.

Note 3: A Change to the Oil Balance in Section 2.

Prior to August 1992, Section 2 of the International Petroleum Statistics Report presented a balance of oil supply, demand, and stock change for the Market Economies, at quarterly time intervals. The communist countries, or Centrally Planned Economies (CPEs) were not included in the balance, mainly because good quarterly data for oil demand in these countries were not available. Net imports from the CPEs were included in the balance as part of total Market Economies supply. At present, the former Soviet Union and most of the countries of Eastern Europe are in transition from communism to market economies; because of this there are no longer good political or economic reasons to publish an oil balance only for the countries that have traditionally been market economies. Beginning with the August 1992 edition, Section 2 of the International Petroleum Statistics Report was changed from a Market Economies oil balance to a world oil balance.

The main data issues related to this change may be summarized as follows:

Supply Data. Monthly oil supply data are available for all countries of the world. These data are used to generate Tables 1.1 to 1.4; they were used to expand the Section 2 supply table (Table 2.2) to the whole world.

Demand Data. EIA has now developed quarterly figures for world oil demand, including demand in the former CPEs; these are published in Table 4 of EIA's Short-Term Energy Outlook. The procedures involved in developing quarterly world demand numbers may be summarized as follows:

Complete monthly data are available for the 24 OECD countries. Annual demand data for all countries (about 200 countries) are presented in EIA's International Energy Annual. In 1993, the OECD accounted for about three-fifths of total world demand, the 25 largest consumers outside of the OECD accounted for about one-third of the world total, and the remaining countries (about 150 countries) accounted for less than one-tenth of the total. The key problem, therefore, is to develop good figures for the 25 largest consumers outside the OECD.

Of these 25 countries, by far the largest consumer is Russia, which in 1993 accounted for about one-sixth of the demand in the group of 25. The next largest consumer is China, which in 1993 accounted for about one-seventh of the demand in the group. Thus in 1993 Russia and China accounted for one-third of the demand in the group of 25. For these 2 countries, data are available on oil production and net exports. The demand numbers shown in Section 2 are computed as production minus net exports. This is the same procedure used in the EIA Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other respected publications that deal with international oil markets. Note, however, that this method of computing demand ignores both refinery gain and stock changes.

For other major consuming countries outside of the OECD, quarterly demand data are developed based upon the latest available annual data, analytic judgment about current trends, and some seasonal adjustments. These are the same procedures used for the Short-Term Energy Outlook.

Stocks Data. Reliable stocks data are available for the OECD countries. Estimates of stocks for export and afloat, and of commercial floating stocks, are available. (See sources at the end of Section 2.)

For on-land stocks outside the OECD, there is little reliable data. Most estimates of on-land stocks outside the OECD are based on the theory that stocks are approximately equal to some number of days of demand. Demand figures (which themselves involve some degree of estimation) are then used to compute estimates of stock levels.

In the International Petroleum Statistics Report, it had been the practice for some time to estimate that on-land stocks in the traditional market economies outside of the OECD were equal to 55 days of demand. This was acceptable, mainly because the rule was used only to estimate a relatively small part of total stocks (about 16 percent).

When Section 2 was converted from a Market Economies oil balance to a world oil balance, there were important changes in the conditions that made it reasonable to estimate on-land stocks outside of the OECD using the rule of 55 days of demand. When the CPEs are included, the stocks that must be estimated are a considerably larger part of the total. In 1990, total oil demand in the former CPEs was more than 80 percent as large as demand in all of the non-OECD traditional market economies. Thus the quantity of stocks that would have to be estimated using a 55-day rule would nearly double, and the estimated components of stock levels and stock changes would become relatively large parts of the total. One consequence of this is that the statistical discrepancy (as shown in Table 2.1) would become less useful as an indicator of the overall consistency of the data. The statistical discrepancy is computed from supply, demand, and stock change. If a large part of the stock change is estimated, then the statistical discrepancy loses much of its significance.

As already noted, quarterly demands in the former Soviet Union and in China are computed as production minus net exports. This computation implicitly assumes a zero stock change. Demand in the former Soviet Union is falling. If we were to use a 55-day rule to compute stock levels, falling demand would imply falling stock levels. This would contradict the assumption of zero stock change which was used in computing demand.

In view of all this, the following approach has been adopted. Table 2.3 now shows levels of stocks for the OECD countries, levels of stocks for export and afloat, and levels of commercial floating storage. Stock changes based on these stock levels are shown in Table 2.1. At this time, no other stock levels are shown. Table 2.1 now has a single line labelled "Other Stock Draw and Statistical Discrepancy", which contains the computed values needed to make the table balance.

It may become possible in the future to obtain reliable information on certain categories of on-land stocks outside the OECD. If such data become available, they will be added to Table 2.3, and the corresponding stock change information will be added to Table 2.1.

Changes in Formats and Sign Conventions. There were several changes in Section 2 to make the International Petroleum Statistics Report more consistent with other EIA publications, especially with the Short-Term Energy Outlook. The numbers were changed from 1 decimal place to 2 decimal places. The word "consumption", as used before August 1992, was changed to "demand". The sign convention for stock changes in Table 2.1 was changed. Stock draws are now indicated by positive numbers, and stock additions are indicated by negative numbers. Table 2.1 also uses a new sign convention for the line labelled "Other Stock Draw and Statistical Discrepancy". The values in this line are now computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw. This is the reverse of the sign convention used before August 1992.

Summary. Section 2 was expanded from a Market Economies oil balance to a world oil balance. Supply data are tracked for all producing countries. Demand data are tracked for the 24 OECD countries, and for 25 large consumers outside of the OECD. Demand for the remaining countries (less than 10 percent of total demand) is estimated, for years that are not yet available in the International Energy Annual. The stock levels in these tables are based on reported data for the OECD and for stocks at sea. The line in Table 2.1 labelled "Other Stock Draw and Statistical Discrepancy" is a balancing item.

Appendix C

Glossary

Appendix C. Glossary

Alcohol. The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Demand (Consumption/Petroleum Products Supplied). Total petroleum products supplied is the sum of all petroleum products supplied. For each product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Crude Oil. A mixture of hydrocarbons that existed in liquid phase in underground reservoirs and remains liquid at atmospheric pressure after passing through surface-separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Government-Owned Stocks. Oil stocks owned by the national government and held for national security. In the United States these stocks are known as the Strategic Petroleum Reserve.

Lease Condensate. A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Natural Gas Plant Liquids. Products obtained from processing natural gas at natural gas processing plants, including natural gasoline plants, cycling plants, and fractionators. Products obtained include ethane, liquefied petroleum gases, (propanes, butane, propane-butane mixtures, and ethane-propane mixtures), isopentane, natural gasoline, unfractionated streams, plant condensate, and other minor quantities of finished products, such as motor gasoline, special naphthas, jet fuel, kerosene, and distillate fuel oil.

Oil Stocks. Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. See Explanatory Note 2.

Other Hydrocarbons. Other materials processed at refineries. Includes coal tar derivatives, hydrogen, gilsonite, and natural gas received by the refinery for reforming into hydrogen.

Oxygenates. Any substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. They include: Fuel Ethanol, Methanol, and MTBE (Methyl tertiary butyl ether).

Petroleum Products. Petroleum products are obtained from the processing of crude oil (including lease condensate), natural gas, and other hydrocarbon compounds. Petroleum products include unfinished oils, aviation gasoline, motor gasoline, naphtha-type jet fuel, kerosene-type jet fuel, kerosene, distillate fuel oil, residual fuel oil, ethane, liquefied petroleum gases, petrochemical feedstocks, special naphthas, lubricants, paraffin wax, petroleum coke, asphalt road oil, still gas, and other miscellaneous products.

Processing Gain. The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss. The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Appendix D

Estimation Procedures

Appendix D. Estimation Procedures

Estimation procedures are used for demand numbers in many of the countries outside of the OECD, in cases where data from EIA's International Energy Annual are not yet available. Demand numbers for 1995 and earlier years, for all countries, may be found in EIA's International Energy Annual 1995, published in December 1996, which is the most recent published edition of the International Energy Annual. EIA's WORLD ENERGY database contains final demand data for all countries of the world for 1994, and preliminary demand data for all countries for 1995. Instructions for downloading this database may be found on EIA's home page (<http://www.eia.doe.gov/emeu/world/contents.html>). The status of the demand numbers shown in Section 2 of this current International Petroleum Statistics Report may be summarized as follows.

The OECD demand numbers are, as usual, based on the latest Quarterly Oil Statistics and Monthly Oil Statistics tapes from the International Energy Agency.

For countries outside of the OECD, the following approach is used. The numbers for 1994 and earlier years match the demand numbers in the WORLD ENERGY database on EIA's home page. Numbers for 1995 forward are the best available EIA estimates, based upon the best annual data currently available, analytic judgment about current trends, and some seasonal adjustments. These are the same numbers that appear in the international oil balance table in EIA's Short-Term Energy Outlook.

The two largest non-OECD oil consumers are the former Soviet Union and China. For these two countries, published data are available on production and net exports. Demand is computed as production minus net exports. This is the same approach used in the Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other major publications dealing with international oil data. Note, however, that because of this computation, the demand numbers for the former Soviet Union and China implicitly exclude stock draw and refinery gain.
